

Louver Clip

GENERAL DESCRIPTION

Plastic lighting louvers are an efficient, economical solution for a variety of lighting and ceiling applications. The open cell design provides a well ordered, architectural appearance while permitting free circulation of air for lower operating temperatures.

Used in conference rooms, commercial and municipal buildings, entries and corridors, perimeter areas and computer rooms.

SPECIFICATIONS

Plastic louvers incorporate a unique edge interlock trim that permits panels to be butted together without a noticeable joint.

Acrylic louvers are molded in a light-stable material and are unaffected by ultraviolet exposure and will not yellow or discolor for up to 20 years.

Styrene louvers are molded in an ultraviolet stabilized material to resist ultraviolet exposure. These styrene louvers meet all industry standards.

ITEM	Description
ALP45-24	White Polystyrene, 23-3/4" x 47-3/4"
ALP45A-24	White Acrylic, 23-3/4" x 47-3/4"
